Untitled - modified SAVE CREATE NEW EXPORT TO LANGUAGE

PREVIEW STAGES TEXT WIZARD

Stage 1 \$match

```
1 *
2 {
3   "productos.precio": {"$gt": 1000 }
4 }
```

Output after \$match stage (Sample of 3 documents)

Document 1:

```
{
  "_id": ObjectId('68def5a6caadce7232bb32cf'),
  "usuarioId": "U001",
  "productos": Array (2)
  fecha: "2025-09-15"
  estado: "pagado"
}
```

Document 2:

```
{
  "_id": ObjectId('68def5a6caadce7232bb32d0'),
  "usuarioId": "U002",
  "productos": Array (1)
  fecha: "2025-09-20"
  estado: "pendiente"
}
```

3. Ventas filtradas por país del usuario (usando \$match y \$lookup)

The screenshot shows the MongoDB Compass interface. The left sidebar displays the database structure with collections: Pipeline, TIENDA, admin, config, and local. The main workspace is titled 'localhost:27017 > Ecommerce > ventas'. The 'Aggregations' tab is active, showing a pipeline with three stages: \$lookup, \$unwind, and \$match. The \$lookup stage is expanded, showing its configuration: 'from': 'usuarios', 'localField': 'usuarioId', 'foreignField': 'ID_usuario', and 'as': 'usuario'. The \$match stage is also expanded, showing its configuration: 'usuario.pais': 'Colombia'. The 'PIPELINE OUTPUT' section on the right shows a sample of 1 document with the following structure: { '_id': ObjectId('68def5a6caadce7232bb32cf'), 'usuarioId': 'U001', 'productos': Array (2), 'fecha': '2025-09-15', 'estado': 'pagado', 'usuario': Object }.

4. Unir ventas con productos y usuarios.

5. Plantee una consulta propia con Match y los operadores and o nor .

6. Plantee una consulta propia con Lookup

The screenshot shows the MongoDB Compass interface. The left sidebar displays the database structure with collections: Pipeline, TIENDA, admin, config, and local. The main workspace is titled 'localhost:27017 > Ecommerce > ventas'. The 'Aggregations' tab is active, showing a pipeline with three stages: \$lookup, \$unwind, and \$match. The \$lookup stage is expanded, showing its configuration: 'from': 'Productos', 'localField': 'productoId', 'foreignField': 'ID_usuario', and 'as': 'producto'. The \$unwind stage is also expanded, showing its configuration: '\$producto'. The \$match stage is also expanded, showing its configuration: '\$expr': { '\$gt': ['\$producto.precio', '\$precio'] }. The 'PIPELINE OUTPUT' section on the right shows a sample of 9 documents with the following structure: { '_id': ObjectId('68def5a6caadce7232bb32cf'), 'usuarioId': 'U001', 'productos': Array (2), 'fecha': '2025-09-15', 'estado': 'pagado', 'producto': Object }.
